Glossop High School, SA

*“In fact I cannot remember the last time I had a software fault on a computer that had been imaged correctly and had HDGUARD active on the machine”*

At Glossop High School, we have over 200 student computers. HDGUARD has been implemented onto these machines with great results, and has become a very important part of our Information Technology repairs and Maintenance structure.

Previously, so much time was wasted with computers that needed to be re-imaged or have software faults rectified. At least 90% of these faults were user related, some being counts of irresponsible usage, and others by accident or not enough knowledge. With the use of HDGUARD, this has been eliminated.

Before we implemented HDGUARD, it was not uncommon for up to ten computers to be down at any given time. Both software and hardware faults were to blame. Now with HDGUARD protecting the student computers, the number of computers that are down at a single time has been halved. In fact I cannot remember the last time I had a software fault on a computer that had been imaged correctly and had HDGUARD active on the machine.

With the use of HDGUARD, we have benefited from less time and money spent on menial repairs. This means that we have been able to spend more time on other IT developments. I now rely heavily on HDGUARD and have not been disappointed.

I would also like to add that the services provided by eye4you have been great and the staff are always friendly.

Yours Sincerely,

Josh Gregory
